Greedy Algorithm

- No Recursion
- Mathematics
- Try to find the local best approach, this will lead us to global best approach.

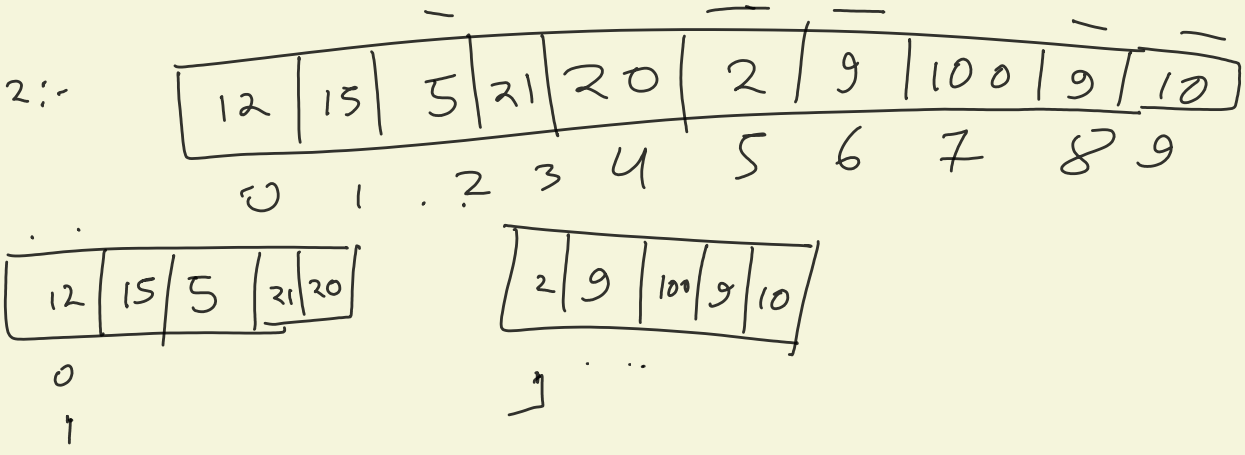

example :- max sum [Bad example of Greedy]

$10+20+30=60$ ✓

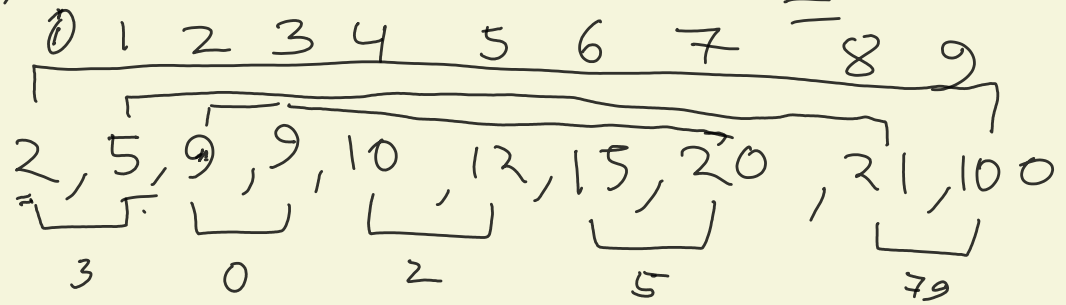

$10+5+50=65$ ✗

eg2:-

$max = |12-2| + |15-9| + |5-100| + |21-9| + |20-10|$

$\Rightarrow 10+6+95+12+10 = 133$

$= 89$

$i = 0 + 2$

$(2 \times i) - (2 \times i + 1)$

$|0 - 1| + |2 - 3| + |4 - 5|$

example :-
